MASSTRANSIT WEB CLIENT PLUG-IN

DEPLOYING THE MASSTRANSIT WEB CLIENT PLUG-IN IN MANAGED ENVIRONMENTS

Group Logic, Inc.
November 6, 2009
Version 2.0

REVISION HISTORY

Version	Author	Changes	Date
1.0	AC/JLB	Initial version.	9/5/2007
1.1	JAL	Updated for 6.0, 6.0.x	2/13/2009
2.0	DMD	Updated for 6.1	11/6/2009

CONTENTS

FEATURE HIGHLIGHTS

OVERVIEW

This document provides a general overview of the deployment process for the MassTransit Web Assistant and Plug-in on supported platforms, including destination component paths and additional steps that may need to be performed for both installation and uninstallation.

INSTALLATION

The core components for the Windows version of the MassTransit Web Client Plug-in are installed into:
C:\Program Files\Group Logic\MassTransit Web Client.

Once installation has completed, launching the MassTransit Web Assistant will unpack, create, and propagate the necessary support files into three folders: Databases, Logs and Security. These folders are created inside the user's home folder. Depending upon the installation platform, these folders will be located in the following locations:

Windows XP, Windows Server 2003
\Documents and Settings\<username>\Local Settings\Application Data\MTAssistant

Windows Vista, Windows Server 2008
\Users\<username>\AppData\Local\MTAssistant

The following table depicts the support files and installation paths once the unpacking process has completed.

npMTWebClient.dll	<Install Folder>	

The Windows installer for the MassTransit Web Client Plug-in is built using the Windows Installer service, and comes bundled as a MSI file. Windows installations can take advantage of the features the Windows Installer service offers, including centralized deployments in Active Directory-based environments.

Detailed instructions for deploying applications in managed Windows environments using MSI installers and the Windows Installer service can be found at the Microsoft Support Knowledgebase web site:
http://support.microsoft.com/default.aspx?scid=kb;en-us;816102

UNINSTALLATION

Follow these steps to uninstall the MassTransit Web Client Plug-in:

1. Quit all instances of the web browser, if any are open or running.

2. Quit the MassTransit Assistant application if it is running.

3. Uninstall through the command line OR control panel:

    a. Unregister the Web Client ActiveX control by running the following command in the installation folder:
       regsvr32 -u axMTWebClient.dll

       The Web Client installation folder is *C:\Program Files\Group Logic\MassTransit Web Client*.

   – OR –

    b. In the Windows Control Panel, open "Programs and Features" ("Add and Remove Programs" for Windows XP/2003 Server). Select the "MassTransit Web Client" entry and click Uninstall/Remove.

4. After the uninstallation completes, delete the user-specific MassTransit Assistant data folder located in *\Documents and Settings\<User Name>\Local Settings\Application Data\MTAssistant* (or *\Users\<User Name>\AppData\Local\MTAssistant* on Windows Vista and Windows Sever 2008) and its contents.

INSTALLATION

The core components for the Mac OS X version of the MassTransit Web Client Plug-in are installed into the user's home folder on the destination machine.

Once installation has completed, launching the MassTransit Web Assistant will unpack, create, and propagate the necessary support files into two folders: Databases and Security. These folders are created inside the user's home folder.

The following table depicts the support files and installation paths once the unpacking process has completed.

UNINSTALLATION

1. Quit the web browser if it is running.

2. Quit the MassTransit Assistant application if it is running.

3. Navigate to */Users/<User Name>/* Library/Application Support/Group Logic/ and delete the *MassTransit Web Assistant* folder and all its contents.

4. Navigate to */Users/<User Name>/Library/Internet Plug-Ins* and delete *MassTransitWebPlugin.plugin.*
